

Lesson 1 Logging On

When you start **StudioWorks** you will be greeted with the logon screen.

If you have been assigned a registration key, enter it in the Registration box. The Registration box appears if the software isn't registered.

Local

If you are *not* connecting to the database over a network, click OK to start the program.

Remote

If you *are* connecting over a network, make sure the network has been setup according to the Networking section of the StudioWorks User Manual.

- Check the Remote Connection check box.
- The program will search for local and remote SQL Express servers.
- When the servers have been found, select the correct one from the drop down box.
- Enter your SQL Express User Name and Password.
- The database drop down box will fill with the available databases.
- Select C:\PROGRAM FILES\M&M STUDIO\SWSQL\STUDIOWORKS.MDF (If the program was not installed on the server in the default directory, the path will be different.)
- Click OK.

Your network settings will be retained the next time you start **StudioWorks**.
